LITHIUM METAL OXIDES

Examiner: Yuan

S.N. 10/827,072

Art Unit: 1745

April 18, 2007

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-33, drawn to a collection of particles comprising lithium metal oxide, classified in class 423, subclass 594.
 - II. Claims 34-42, drawn to a battery comprising an anode comprising lithium titanium oxide and a cathode comprising lithium manganese cobalt oxide, classified in class 429, subclass 128.

The inventions are distinct, each from the other because of the following reason:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the battery does not require a particular particle diameter of the lithium metal oxides to show novelty and unobviousness. The subcombination has separate utility such as electrode active material for a fuel cell. See US 4,386,040.

3. If invention I is elected, an election of species is required. This application contains claims directed to the following patentably distinct species of the claimed invention.

Art Unit: 1745

I-1, Claims 1-10, drawn to a collection of particles comprising lithium cobalt oxide or derivatives having an average diameter less than about 100 nm.

I-2, Claims 11-20, drawn to a collection of particles comprising lithium nickel oxide or derivatives having an average diameter less than about 100 nm.

I-3, Claims 21-33, drawn to a collection of particles comprising lithium titanium oxide or derivatives having an average diameter less than about 100 nm.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1745

6. Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dah-Wei D. Yuan whose telephone number is (571) 272-1295. The examiner can normally be reached on Monday-Friday (8:00-5:00).
